i. Cover Letter

To: Dr. Wesley Schultz, Advisor to Keep America Beautiful

CC: Dr. Shaun-inn Wu, Director of Projects

Going into the Prototype I phase of the project we had to revise a significant portion of the list of tasks we had planned originally after collaborating with the machine learning team and discussing the feasibility of some of our original goals. After reorganizing our efforts, we were able to create a working user interface that queries the user for certain locational data inputs, such as an address, and converts it into a JSON file which we will send over to the Automated Image Retrieval Program created by Cougar Student Technologies. We had also reconfigured this program to pull a certain number of points to satisfy a 95% confidence interval with a 5% margin of error instead of prompting a user, which may allow said user to pull all points from a graph which may lead to future technical and budgetary issues. The current interface will be adjusted to reflect these search parameters for the time being. We were able to use this program to pull enough images for the machine learning team's new dataset, however we will need to collect another set of images as the FOV, and pitch parameters of the image set we have pulled are not able to satisfy their requirements.

For the next phase of the project, we will work with the machine learning team to establish a connection from our project to theirs to send and receive data through a TCP socket. Once we can consistently receive data from the machine learning algorithm, we can continue work on the user interface by implementing some form of data visualization. We will also be working on a storage solution to temporarily hold onto the pulled images as well as to hold the KAB scores and dates. The estimated cost of the next phase of the project will be approximately \$4,875.

The time and cost of the third phase split between the five members of the SAIRA team has totaled 217 hours at a rate of \$25.00 an hour, yielding a total amount of \$5,425. The remaining two phases are projected to cost about \$6,625. As of now the total accumulated cost of the project is \$9,984.75 and is subject to change as we continue to work on this project which we expect to cost \$16,725.

Best Regards,

Ray Thomas Cruz

A copy of this report will be submitted to both Dr. Schultz and Dr. Wu

By signing below, you hereby approve Team SAIRA to continue working on the following project: Keep America Beautiful: Litter Detective and agree to the aforementioned estimated costs.

Dr. Wesley Schultz, Advisor to Keep America Beautiful

1. Application Development

1.1 Statement of Business Context

Keep America Beautiful is a nonprofit organization with the mission to improve and clean the environment so we can have a beautiful and green country. One major goal to achieve this mission is to end littering. Littering is a major environmental issue that destroys the environment by polluting areas. There have been many ways that Keep America Beautiful have expressed their efforts to help end littering. They've done this through events and programs like Great American Cleanup and America Recycles Day.

1.2 Statement of Customer's Business Problems

- Keep America Beautiful needs a web based application with a user interface that detects litter in an area.
- Must be able to select geo-coordinates based on user-defined regions.
- Make litter scores accessible within the user-interface from the Machine Learning algorithm.
- Make images and data accessible to the Machine Learning Algorithm

1.3 Statement of Project Proposal

- Create a fully functional user interface that gives the user the ability to select geo-coordinates for a defined region.
- The ability to pull images and data from Google Streets.
- Record data of location and date of images pulled.
- Make a UI that works with the ML team algorithm.
- Display a data visualization of scored litter.
- Make it accessible on google cloud.

1.4 Measures of Success

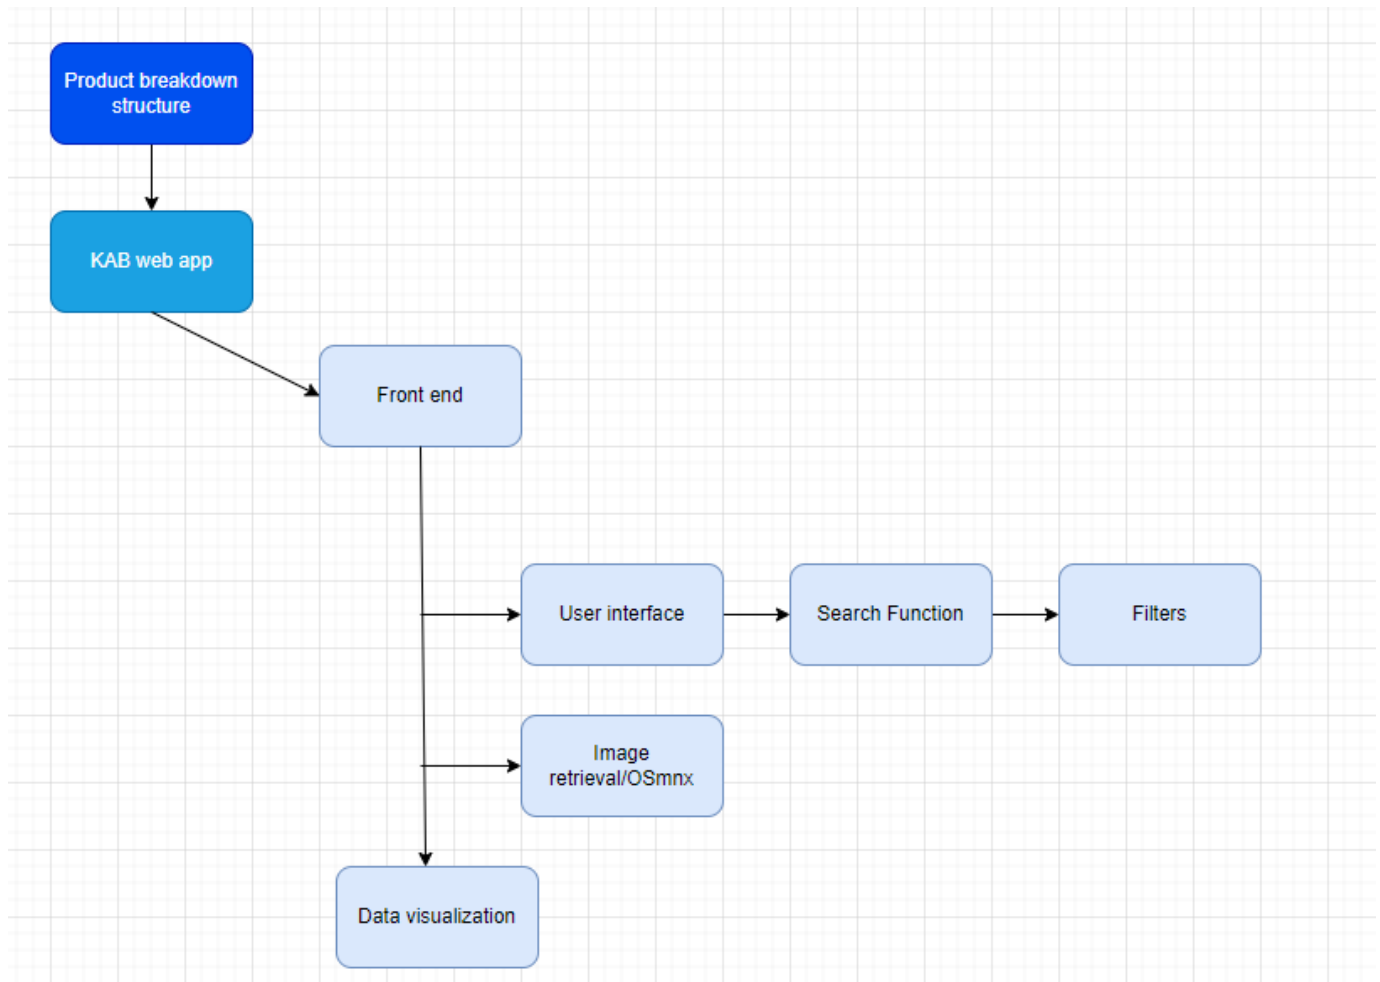

- JAD 1 - Define the requirements of the project.
- JAD 2 - Make any final adjustments or changes to the requirements.
- Prototype 1 - UI development, gives the user the ability to search for a geo-region.
- Prototype 2 -Implement Data Visualization
- Final Phase - Have a fully functional and complete UI that works with the ML teams algorithm.

2. Requirements Matrix

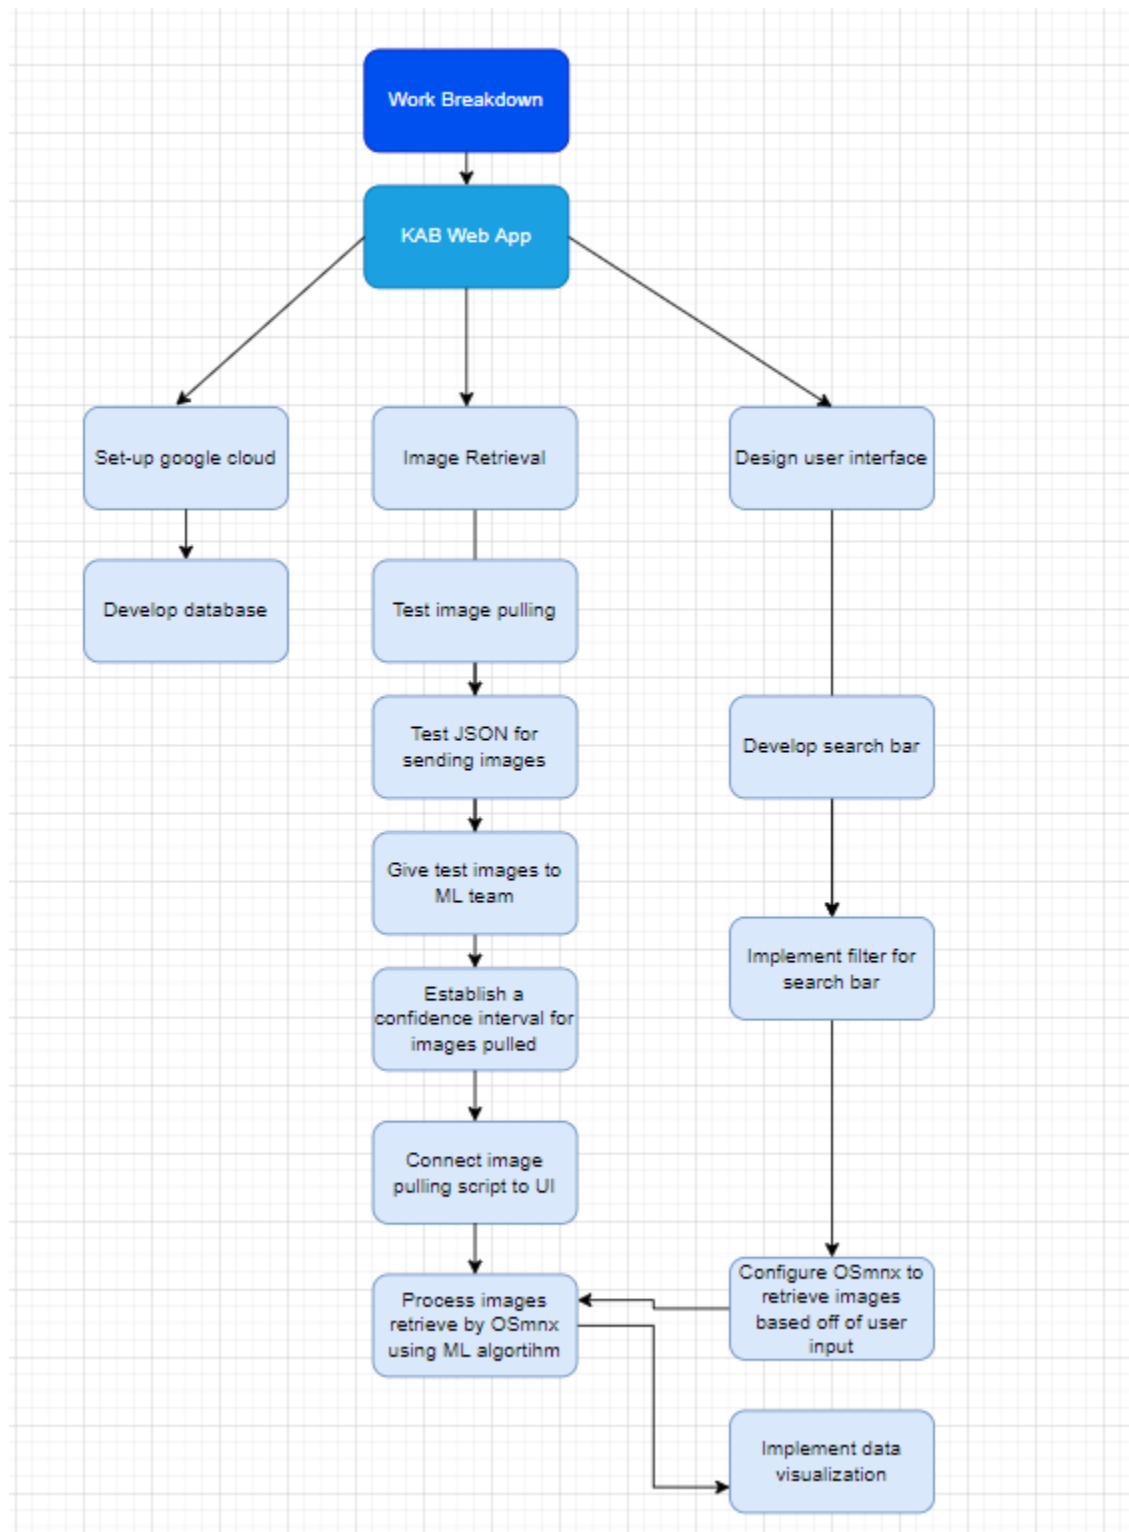

Req. #	Requirement	Description	Implemented [Y/N]	Task
1	Image pulling	-Implement OSMnx to draw streets of selected Cities	y	3.1.3
2	Image Storage	-Decide where to store images pulled with OSMnx -Store image and date pulled -Integrate with ML team	N	3.1., 4.2
3	User Interface	-Design User Interface -Display results from user Query -Retrieve Information from ML algorithm	N	3.2.1,3.2.2
4	Visual Representation	-Display Heatmap -Display KAB Score (Date, Amount of litter, 20 specific objects)	N	3.1.2,3.2.3
